

AI-Enabled Revenue Cycle Management

Transform Revenue Performance with
Agentic AI Orchestration

Healthcare organizations are challenged by staffing shortages, rising denial rates, increasing payer complexity, and growing regulatory demands. Manual, disconnected revenue cycle processes create revenue leakage, delay reimbursement, and increase the cost to collect.

XBP Global's HealthOS is an AI-first Revenue Cycle Management platform that orchestrates intelligent workflows across the front, mid, and back office, helping healthcare organizations prevent revenue leakage, accelerate cash flow, and improve financial performance.

Unlike point automation solutions, HealthOS connects AI agents across people, processes, and systems to create an intelligent, autonomous revenue cycle.

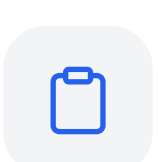

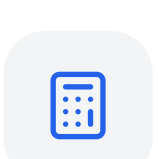

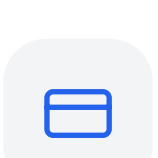

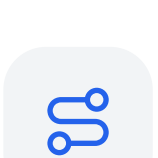

Front Office

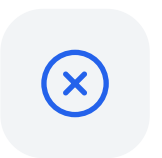

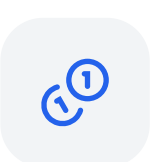

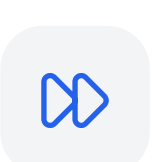

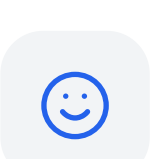

Frictionless Patient Access

Create a seamless patient financial experience while reducing downstream denials.

AI Capabilities

-  Automated patient scheduling and registration
-  Real-time eligibility and benefits verification
-  Prior authorization management
-  Patient cost estimation
-  Digital payment collection
-  Intelligent exception routing

Business Impact

-  Reduce front-end denials
-  Improve point-of-service collections
-  Accelerate financial clearance
-  Enhance patient satisfaction

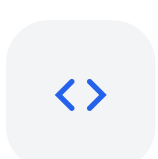

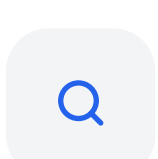

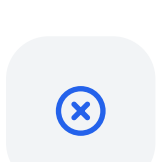

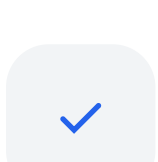

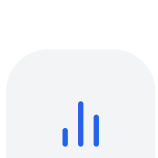

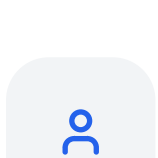

Mid-Cycle

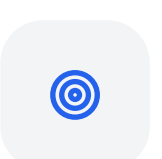

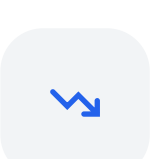

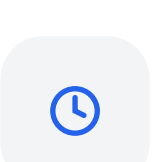

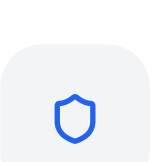

Intelligent Revenue Integrity

Improve coding accuracy and documentation quality with AI-assisted coding and Clinical Documentation Integrity (CDI).

AI Capabilities

-  AI-assisted ICD-10, CPT & HCPCS coding
-  Clinical documentation analysis
-  Documentation gap identification
-  Charge capture validation
-  HCC/RAF support
-  Human-in-the-loop governance

Business Impact

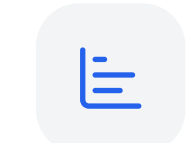

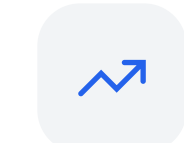

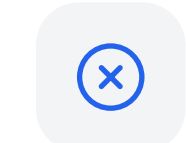

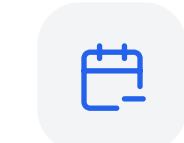

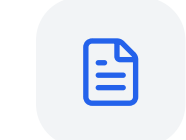

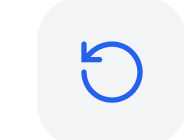

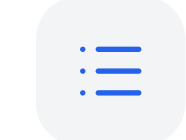

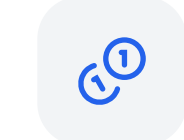

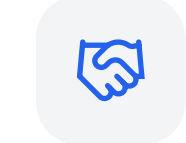

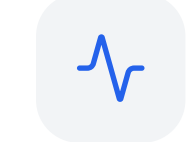

-  Improve coding accuracy
-  Reduce coding-related denials
-  Accelerate coding turnaround
-  Strengthen compliance and audit readiness

Back Office

Smarter Revenue Recovery

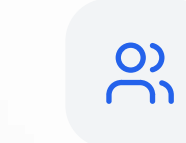

Maximize reimbursement through AI-driven denial management and Accounts Receivable optimization.

AI Capabilities	Business Impact
 Denial prediction and prioritization	 Increase cash recovery
 Automated underpayment detection	 Reduce Days in AR
 AI-guided appeals	 Improve denial recovery rates
 Predictive AR prioritization	 Lower cost to collect
 Payer contract compliance	
 Root-cause analytics	

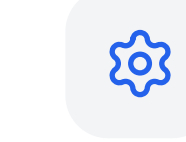

Why XBP Global?

AI + RCM Expertise

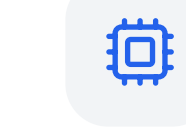

Our AI-enabled operating model combines intelligent automation with deep Revenue Cycle Management expertise to augment - not replace - your workforce.

- 

People:

AI empowers staff to focus on high-value work; human oversight ensures quality and compliance
- 

Process:

End-to-end workflow orchestration, intelligent exception management, and continuous process optimization
- 

Technology:

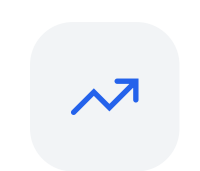

Agentic AI orchestration, predictive analytics, human-in-the-loop governance, and seamless integration with EHRs, practice management systems, clearinghouses, and payer platforms

Impact That **Compounds** Across the Revenue Cycle

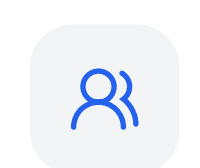

Gains here don't stay isolated to one department. **Cleaner front-end registration means less coding rework; tighter coding means fewer denials; fewer denials mean shorter AR cycles.**

The result is impact that builds as it moves through the revenue cycle, not four separate wins.

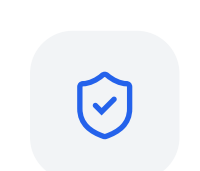

Cash moves faster and leaks less

Preventing leakage upstream and lowering the cost to collect downstream both improve the same number: net revenue realized per patient encounter.

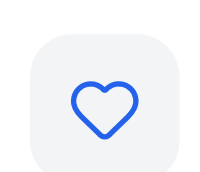

Teams do more without adding headcount

Automation absorbs the repetitive work, so Patient Access, Coding, and AR staff spend their time on the exceptions and judgment calls that actually need a person.

Governance keeps pace with automation, not behind it

Every AI-driven workflow keeps a human checkpoint built in, so faster throughput doesn't come at the cost of documentation quality or audit readiness.

Patients notice the difference too

Faster scheduling, transparent cost estimates, and simpler digital payments reduce friction on the patient's side - which is also what reduces bad debt and collection calls on yours.

Transform Your Revenue Cycle with AI

XBP Global helps healthcare organizations **modernize Revenue Cycle Management through Agentic AI, intelligent automation, and managed services**, delivering measurable improvements in financial performance, operational efficiency, compliance, and patient experience.

Schedule an AI Revenue Cycle Assessment to discover how HealthOS can help your organization unlock new revenue opportunities and build a smarter, more resilient revenue cycle.

AI-Enabled Revenue Cycle.

Intelligent Operations. Stronger Financial Outcomes.

ABOUT

At XBP Global, we grow with purpose: We orchestrate mission-critical systems that enable hyper-automation through domain expertise, adaptive AI, and measurable outcomes.
